Calgary, Alberta | Okanagan, British Columbia

SERVICE DIVISION

HORIZONTAL DIRECTIONAL DRILLING

HDD is the preferred method for underground utility installation in urban corridors, environmentally sensitive areas, and complex infrastructure programs. PTL operates 7 HDD rigs across three size classes - all equipped with rock tooling and full mud system support - giving clients a single source for any bore diameter, any ground condition.

UNIT	QTY	PUSH/PULL	BEST APPLICATION
Vermeer 10x15	x3	10,000 lbs	Up to 80m · House services · Conduit ≤ 3"
Vermeer 20x22	x1	20,000 lbs	Up to 120m · Conduit 4-6"
Vermeer 40x55	x3	40,000 lbs	400m+ · Conduit up to 12" · Complex bores

KEY APPLICATIONS

- ▶ Shallow utility installation (gas, power, fibre, water)
- ▶ Road and highway crossings
- ▶ Poly-B pipe replacement
- ▶ Subdivision servicing
- ▶ Large-diameter pipeline crossings
- ▶ River and waterway crossings
- ▶ Substation and transmission feeder
- ▶ Emergency utility replacement

TOOLING ON ALL UNITS

WHY PTL FOR HDD

- ▶ Three drill size classes - matched to your bore requirements, not the next available rig
- ▶ Rock tooling standard across all units - no delays waiting for speciality tooling mobilization
- ▶ Full mud system support - proper fluid management on every bore, every time
- ▶ IFR / IFC constructability review - PTL engages early to surface conflicts before they become site problems
- ▶ Experienced locator operators - pinpoint accuracy in congested utility corridors
- ▶ COR certified crews - safety culture embedded at the operator level, not just the management level

POLY-B REPLACEMENT SPECIALISTS

PTL's HDD capability makes us a natural fit for residential Poly-B pipe replacement programs - a rapidly growing market in Alberta and BC. Minimal surface disruption means faster completion, lower restoration costs, and less disruption for homeowners and their neighbours.

SERVICE DIVISION

HYDROVAC EXCAVATION

Hydrovac is the safest and most precise method of ground disturbance around buried infrastructure. PTL operates Alberta and BC's most capable Hydrovac fleet - with specs above industry standard and crews trained to maximize production on every site.

SERVICE CAPABILITIES

- ▶ Utility daylighting & locates
- ▶ Integrity digs and pipeline exposure
- ▶ Mass excavation support
- ▶ Poly-B service replacement
- ▶ Jetting & cleaning service
- ▶ Precision slot trenching
- ▶ Pole & base replacement support
- ▶ Fluid control & dewatering
- ▶ Emergency response excavation
- ▶ Backfill & surface remediation

B2B - TRADE

Supporting electrical, civil, and utility contractors across Alberta and BC. Available as standalone Hydrovac or as part of PTL's turnkey model.

B2C - DIRECT

Direct residential and commercial service in the Okanagan, BC. Homeowners and property managers - Poly-B replacement, utility locates, site services.

HYDROVAC EXCAVATION

FLEET - 10 UNITS

TRUVAC WOLF TRI-AXLE x 5 High - capacity production unit. Max debris tank. Max blower performance.	FOREMOST TRI-AXLE x 4 Canadian-built heavy-duty tri-axle. Full production capability.	TRUVAC COYOTE TANDEM x 1 Compact tandem unit for access - restricted and sensitive sites.
--	---	---

14 YARD Debris Tank	5300 CFM Blower Power	20 GPM Water Pump	10" BOOM Hose Diameter
----------------------------------	------------------------------------	--------------------------------	-------------------------------------

ABOVE-STANDARD FLEET SPECS

PTL's 5300 CFM blowers and 14-yard debris tanks exceed standard fleet specs - meaning more production per shift, fewer haul cycles, and lower cost per cubic metre for our clients.

FULL - SCOPE DELIVERY

THE PTL TURNKEY MODEL

PTL's HDD and Hydrovac divisions operate jointly under a single contract - giving clients one team, one invoice, and zero scope gaps from first locate to final remediation.

1

DESIGN REVIEW & CONSTRUCTABILITY

Early IFR/IFC engagement - PTL identifies utility conflicts, terrain challenges, and design issues before they become site problems.

2

UTILITY DAYLIGHTING & LOCATES

Hydrovac - first approach - every bore path is cleared and confirmed before the drill is in the ground.

3

HDD DRILLING & CONDUIT INSTALLATION

Matched rig size for the scope. Rock tooling standard. Mud system managed on site.

4

BACKFILL, REMEDIATION & HANDOVER

Site left clean. Surface restored. Client's crew picks up where PTL leaves off - or PTL carries the full scope to completion.

BUILT AROUND YOUR NEEDS

Not every client needs the full turnkey package. PTL works collaboratively to scope the right level of involvement - standalone Hydrovac, standalone HDD, or the complete civil package including Poly-B replacement, fibre builds, street lighting programs, and emergency response. If you need it in the ground, we can build a model that works.

SECTORS SERVED

- ▶ Electrical & Utility Contractors
- ▶ Land Developers
- ▶ Oil & Gas Facility
- ▶ Telecommunications
- ▶ Civil & Infrastructure GCs
- ▶ Municipal & Government
- ▶ Residential & Property Owners
- ▶ Water & Wastewater
